

WATERMAKER MINI – PURE WATER MADE AFFORDABLE

Pure water is the basis of good health. Tap water is often polluted with heavy metals, pathogens and other undesirable pollutants.

Active charcoal filters as well as most other filters available on the market purify the water by absorbing the toxins. In time the filter is full of toxins and must be replaced. It can also release some of the absorbed toxins again, when unpolluted water is filtered. That is bad, because a continuous exposure, even with tiny quantities of toxins, are much more dangerous to the body than sporadic, higher exposures.

REVERSE OSMOSIS MAKES THE DIFFERENCE!

Reverse osmosis solves this problem. The water is pressed through a membrane with tiny pores under high pressure. Only clean water can pass the membrane. The pollutants are washed out with the residual water.

The reverse osmosis filter **Nimbus WaterMaker Mini** is the only reverse osmosis unit that can be directly attached to the water tap, but delivers the same pure, clear water like large and expensive filtration systems! The first installation can be done in a few minutes and does not require technical skills; thereafter the filter can be mounted and removed in just seconds as needed. Complicated installation is a thing of the past, also transporting heavy bottles of drinking water from the super market.

WaterMaker Mini can produce up to 10 gallons of water per days. The membrane of the reverse osmosis system filters out up to 98% of the dissolved solids and more than 99% of the micro biological pollution.

The following list informs about the different pollutants. The percentage indicates which portion of the pollutant is filtered out under norm conditions.

| | | |
|--------------------------|-------------------------------------|--------|
| bacteria | pathogens | 99%+ |
| manganese | are suspected to cause BSE and vCJD | 96-98% |
| aluminum | involved in Alzheimer's | 96-98% |
| copper | involved in tumor formation | 96-98% |
| nickel | causes prostate problems | 96-98% |
| cadmium | can lead to high blood pressure | 93-97% |
| sodium | | 92-98% |
| silver | | 93-96% |
| potassium | | 92-96% |
| iron | | 96-98% |
| zink | | 96-98% |
| mercury | causes nerve damage | 94-97% |
| lead | causes nerve damage | 95-98% |
| calcium | | 93-98% |
| magnesium | | 93-98% |
| water hardness (Ca & Mg) | | 93-97% |
| radioactivity | causes DNA breaks | 93-97% |
| chloride | | 92-95% |
| ammonia | | 80-90% |
| bromium | highly toxic | 90-95% |
| phosphates | | 95-98% |
| polyphosphates | | 96-98% |
| zyanide | | 85-95% |
| sulfate | | 96-98% |
| silica | | 92-95% |
| nitrate | | 90-95% |
| boron | | 50-70% |
| borate | | 30-50% |
| fluoride | highly toxic | 92-95% |
| chromate | | 85-95% |

The Nimbus WaterMaker Mini: quickly installed, practical, absolutely pure water.
